CapTouch I2C interface

Each board have mark with number.

Each board have it's own I2C address.

Board number	I2C address							
1	0x41							
2	0x42							
3	0x43							
4	0x44							
5	0x45							
6	0x46							

pi@sanchox-rpi3:~ \$ i2cdetect -y 1																
	0	1	2	3	4	5	6	7	8	9	a	b	С	d	е	f
00:																
10:																
20:																
30:																
40:		41	42	43	44											
50:																
60:																
70:																

Each board have set of registers with data for each capacitive element on board.

For this FW version available data:

- from 0x0 to 0x12 uint16 values represents each capacitive element raw value
- from 0x20 to 0x32 uint16 values represents each capacitive element filtered value (not usable because lack of threshold constants data)

Elements numbering example:

8	1	2
7	9	3
6	5	4
